## **DETAILED ACTION**

### ***Priority***

1. This application discloses and claims only subject matter disclosed in prior Application DE 102 32 423.9 filed 07/17/2002, and names an inventor or inventors named in the prior application. Accordingly, this application may constitute a continuation or division. Should applicant desire to obtain the benefit of the filing date of the prior application, attention is directed to 35 U.S.C. 120 and 37 CFR 1.78.

### ***Specification***

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc. Abstract contains the languages such as " the invention and comprising ".

### ***Claim Objections***

3. Claims 9 and 10 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent can not depend on another multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claim 9 and 10 have not been further treated on the merits.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Rebsdorf US patent 6,566,764.

Rebsdorf 764 discloses a variable speed wind turbine having a converter providing of operating a wind turbine (200, column 8, line 56, Fig. 2), wherein rotor (212) windings of an induction generator (210, column 8, line 59), which comprises stator coils (213, column 9, line 1) coupled to a voltage grid (column 9, line 11), fed with rotor currents by a feed-in unit are driven by a rotor of the wind turbine; wherein the frequencies of the fed-in rotor currents are controlled depending on the rotor rotation frequency and the feed-in unit is electrically decoupled from the rotor windings in the case predetermined variations of the grid voltage amplitude ( see column 9, lines 19-39) the rotor current feed-in is resumed after the decoupling caused by the variation of the grid voltage

are fed in via a converter (151, Fig. 1) coupled to the grid voltage, in particular via an intermediate DC voltage (152 DC link) converter with a rotor-sided rotor current converter and a grid-sided grid converter (154, Fig. 1) and during the decoupling the rotor windings are short-circuited (see column 3, line 15-18).
